Protective glove with reservoir for cleaning product - product released by pressure on reservoir and glove can have sponge or metallic granules on surface

LAMY-PERRET E 09.06.88-FR-007887

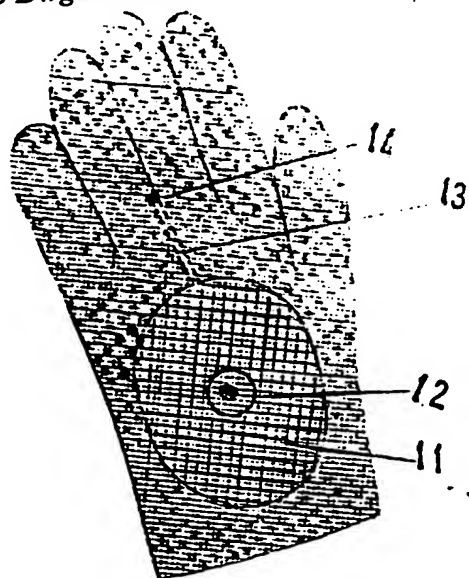

(15.12.89) A47k-07/03 A47l-13/19

09.06.88 as 007887 (1120JT)

The glove has a reservoir (11) which is made of rubber, or similar material, and contains perfume, detergent or other products. A stopper (12) keeps the reservoir airtight and allows it to be refilled. The liquid is ejected by pressing on the reservoir with the fingers and passes through tubes (13) to an opening, near the palm of the hand.

The glove's outer surfaces can have abrasive, spongy, non-inflammable or magnetic material incorporated in them. A handle can be joined to the glove, for use in a shower and it can have a pocket, to hold objects.

USE/ADVANTAGE - For use in domestic, agricultural, or industrial applications to protect the hands and for cleaning or scouring. (6pp Dwg.No.1/9)
